LICENSE INFORMATION - PLEASE READ FIRST!

Read the following notice carefully before using this software.

The following are terms and conditions you must agree with in order to use/run this software.

If you DO NOT agree to the following you may not use this script, in whole or any part of it.

You are licensed to use ONE copy of this software on your server.

PLEASE NOTE: You only need to install the script once and use for installing unlimited blogs across multiple domains or sub-domains.

WP Manager DX will be used for installing blogs on domains owned by YOU.

If you want to host others using WP ManagerDX then you MUST contact Us for License Pricing.

You should carefully read all of the following terms and conditions before using this software. Your use of this software indicates your acceptance of this license agreement and warranty.
THIS SOFTWARE IS OWNED BY WPMANAGERDX.COM

AND IS PROTECTED BY COPYRIGHT LAWS
AND INTERNATIONAL TREATY PROVISIONS.

You may not remove the copyright notice from any copy
of the software or any copy of the materials accompanying the
software.

Anyone using this script without paying any and all necessary
fees is in violation of United States and International copyright
laws.

Distribution

You may not charge or request any form of payment from any copies
you may make of this program. You may not distribute this product
alone or with any other products without written permission from
the original copyright owner.

You may modify this script for your own personal use but you may
not give them away, sell the script or host people using the
script more than once.

Disclaimer of Warranty

THE INFORMATION AND CODE PROVIDED IS PROVIDED AS IS WITHOUT
WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING BUT
NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND
FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL
WPMANAGERDX.COM BE LIABLE FOR ANY DAMAGES WHATSOEVER
INCLUDING
DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL, LOSS OF BUSINESS
PROFITS OR SPECIAL DAMAGES, EVEN IF WPMANAGERDX.COM HAS BEEN
ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

=====

SYSTEM REQUIREMENTS:

- Cpanel Based host
- PHP v4.3 or higher on Unix
compatible system.
- MySQL DB version 3.23 or newer
- Ability to open URLs from PHP, i.e.
URL-aware fopen wrappers and sockets.

-Ability to run Unix shell commands from PHP. PHP 'safe_mode' is NOT compatible with this script.

- PHP file uploads to restore backups.

- PHP PEAR DB and Template modules, normally present, if not, can be put in script directory (Included with this package).

- "unzip" command-line utility to extract WP theme/plugin files.

- NO blocking access to Cpanel hosts on port 2082

Installation is available:

If you would like us to install the script for you please send payment of \$25 via paypal to admin@wpmanagerdx.com.

Refund is not included with installation fee.

Once you make payment provide us with temporary cpanel/ftp login details to admin@wpmanagerdx.com.

Your information is kept in confidential is not shared in any way. Once we are done with installation proceed to change your login details.

These instructions are general, you will need to have knowledge in cpanel, FTP client and database creation.

FTP Installation (These steps work on most servers)

Here are the simple steps for installing the script:

=====

1. Unzip the WPManager-#.#.#.zip, then WPManager-#.#.#-optional.zip archive(s).

2. In your Cpanel, setup MYSQL database first. You will need to write down Database Name, Username and Password.

3. Upload all the files to the server (you may create a new directory on your server if you wish and then upload all the files to that directory (ie. <http://yourdomain.com/wpmanager>).

4. CHMOD the following files with the proper file permissions:
CHMOD to 777(world writable) the following folders:

Templates/
Config/
backup/
tmp/
themes/
plugins/

CHMOD to 666 the following files inside folders listed below:

Config/config.php
Templates/*.*
plugins/*.*
themes/*.*
tmp/*.*

. means all the files inside folder.

This is needed because PHP scripts most often run under different user ID than your server login ID and would not be able to change these files otherwise.

Please Note: If server uses phpsuexec/suPHP then you don't have to CHMOD any files.

6. The default login info when you run the setup.php is in Config/config.php

Enter the following in the first part of the setup page:

Current Username: admin
Current Password: demopass

Don't click the **Upgrade DB Button**, this is only required when upgrading the script to new version.

Continue with filling out the rest of the form, such as the new admin login and MYSQL database information.

If setup.php gives a message about a problem, fix it and refresh web page.

IMPORTANT:

Possible Problems.....

If you encounter some Warnings and Suggestions when you run setup.php, and still see the form to fill-out with your info then no need to worry, they are what it is just Warnings! It should not affect completing the installation.

Just make sure you take care of the important settings and if you see the forms to fill-out below the warnings, it means you can continue with setting up the system.

If setup.php complains about missing DB.php or HTML/IT.php you need to get a second archive with name ending in -optional. It has PEAR modules, WordPress itself, WordPress themes & plugins.
(you should upload these files anyway)

Once it is done it will take you to the WP ManagerDX Admin Area > Edit Settings. Check that all the settings are correct and then hit save.

Installation is successful! You may now start creating all the wordpress blogs you want.

You can now DELETE setup.php from your host.

Once inside WPMdx admin area you will see a *Help* link to the right of each section. Click on that and it will explain in detail how the current section works or refer to the *Admin Help guide* included with this package.

You can also access the help guides below:

<http://wpmanagerdx.com/guide>

Setting up Cron Job:

This is necessary if you would like to use the *Upgrade Plugins* Section under *Manage Plugins*. This cron job will run every 24 hours and will automatically check and Upgrade plugins that have been activated when installing a blog with wpmanagerdx.

It will **ONLY** upgrade plugins within WordPress admin area > *Plugins* section that provide the *Automatically Upgrade* feature and **NOT** via WP ManagerDX *Add/List Plugins* section under *Manage Plugins* .

If you would like to run the cron manually then you can login to your wpmanagerdx admin area and go to *Add/List Plugins* section and click the link provided in this section: ie. <http://yourdomain.com/wpmanager/cron.php>

Ok now on to the Cron Job setup instructions:

```
*/2 * * * * lynx -dump  
'http://www.yourdomain.com/pathto/cron.php'>/dev/null
```

Usually you can do that using your hosting web control panel, or Unix shell and 'crontab -e' command. If you don't know how, and this is not done at setup time, please consult your web hosting support personnel.

In case of Cpanel, click on *Cron Jobs*, than click on *Advanced*, enter 1 for Minute, 24 for Hour, Day, Month & Weekday, and enter in the field next to the right:

```
lynx -dump 'http://www.yourdomain.com/wpmanager/cron.php' >/dev/null  
for command.
```

Remember to replace the URL with your http address.

Manage Content Autoposter

If you wish to use this section in your wpmanagerdx admin area then you need to unzip **ManageContent_Autoposter_Module_v.1.xx.zip**. **This package is included in your member download area.**

Once you do that, please read the Installation Instructions included.

UPGRADING WP MANAGERDX TO A NEWEST VERSION:

Via FTP:

To Update script from an older version, download the most recent version from the member area download section, unzip and read CHANGES.txt or CHANGES.pdf. You should start with the version that is next of the one you are currently using. It has the modified files listed that need to be uploaded to your host.

After you upload the new files and replace any that were changed then Run setup.php, enter current Admin username and password and **Click Upgrade DB Only** button for updating the Database tables and possible creation of New tables.

For script installation, send \$25 via Paypal to admin@wpmanagerdx.com.

When you have completed payment, please provide your ftp/cpnel login details including the domain name and folder you want wpmanagerdx to reside on. Send it to admin@wpmanagerdx.com.

Please allow up to 12 hours for installation to be completed. **Installation fee is not refundable.**
